

Erratum to Klein

In the article, "Changes in Leadership Appraisal as a Function of the Stress of a Simulated Panic Situation," by Andrew L. Klein (*Journal of Personality and Social Psychology*, Vol. 34, No. 6, pp. 1143-1154), the first two sentences of the first full paragraph in the right-hand column of page 1152 read as follows:

In terms of fear aroused by the situation shock was much more threatening than the fear of monetary loss. The least fear aroused was in the leaderless-money-loss group; the next least fearful was the led-money-loss group; next, shock with a leader present was fear arousing, and finally, the most fearful situation had shock as the threat and no leader present (Scheffé test, $p < .001$).

These sentences should be changed to read:

In terms of fear aroused by the situation, shock was much more threatening than the fear of monetary loss. The least fear aroused was in the led-money-loss group; the next least fearful was the leaderless-money-loss group; next, shock without a leader present was fear arousing; and finally, the most fearful situation had shock as a threat and a leader present (Scheffé test, $p < .001$).

In addition, Table 3 (p. 1152) should be changed to read as follows:

Table 3
*Control Groups Versus Experimental Groups
Analysis of Variance and Treatment Means on
Fear Arousal*

Variable	Treatment <i>M</i>	No. repli- cations	Rank order
Experimental (led)			
Money	3.5938	64	1*
Shock	7.0156	64	4*
Control (no leader)			
Money	4.0625	8	2*
Shock	5.7500	8	3*

* Differences between variable orders are significant at .001 as determined by a Scheffé test.
